The Clean Machine

24/7 filtration in a plug and run unit

- Save money as you recycle used fluids
- Get more life from your compounds
- Point-of-use location to suit your business
- Compact unit with a tiny footprint
- Model range matched to your output
- Low maintenance: a built-in cleaning cycle
- Filter membrane lasts up to 18 months
- Simple to use - switch on and forget it
- Applications throughout most industries
- Easiest system yet for recycling waste fluids
- Collects soils in a drum for easy disposal

The WasteWizard system sits on either a standard 55 gallon/200 litre drum or a larger 100 gallon/380 litre drum.

This makes for convenient waste disposal once all the oils and solids have been concentrated to a high level.

Comes complete with its own fluid transfer system that automatically exchanges the dirty cleaner from the washer with recycled cleaner.

Re-use up to 85% of spent compounds

...and reduce oily waste generated by up to 99%

From Osmonics - world leaders in waste liquid and water filtration - comes the *WasteWizard*.

Using a patented polymer membrane to filter out and collect the soils that would otherwise reduce the useful life of most industrial fluids, the *WasteWizard* is the small solution to a big problem.

Perfect for mass finishing compounds, aqueous cleaner baths, mopwater and other water based industrial fluids, the unit's ability to recycle used fluids continuously is unparalleled. It will save you a fortune in chemical usage, water usage, waste processing and labour costs.

Stop watching your profits go down the drain!

The *WasteWizard* really does make you savings in every area.

- Re-purified liquids can be reused thus reducing your production costs.
- Continuous filtration prevents the build up of oil and dirt contamination in the process sump
- Keeps your working fluids from going off-spec and avoids degrading the quality of your parts with costly reworks.
- No pre-filtration necessary - made to handle high solids
- Located right where you need it for point of use recycling

So which *WasteWizard* is right for your business?

model	number of stacks	approx dry weight	gallons per day permeated	(cubic metres per day)
WW-1	1	196 lbs (89kgs)	100	(0.38)
WW-2	2	200 lbs (91kgs)	200	(0.76)
WW-3	3	204 lbs (93kgs)	300	(1.14)
WW-4	4	224 lbs (102kgs)	400	(1.51)
WW-5	5	241 lbs (110kgs)	500	(1.89)

Boxed dimensions for all machines 25" x 26" x 46" (64cm x 65cm x 116cm)

Low volumes? Then try the 'MiniWizard'

Same technology as the *WasteWizard*, but built to handle capacities in the range of 10-50 gallons per day.

The *MiniWizard* system is designed as an automated, point-of-use device for the factory floor, ideal for use in cellular manufacturing and small parts washing operations - such as metal finishing and automotive garage shops.

It recycles spent industrial fluids at a rate of 50 gallons (190 litres) per 24 hours and is generally applicable to parts washers with a capacity up to 100 gallons (380 litres).

The compact *MiniWizard* uses a patented filter membrane in a novel cylindrical format to filter out and collect oil emulsions, particulates, soils and other contaminates. It sits on a 16 gallon (60 litre) drum with a footprint of just 14 inches (30 cm).

The *MiniWizard* weighs just 110 lbs (50kgs) and comes in 110 or 220 volt / single phase options.

Please call for further details on the **WasteWizard** and **MiniWizard** ranges.
